

PROFILE

First-year ICT Engineering student at TEK-UP University with hands-on experience in Linux (RHEL), infrastructure automation with Ansible, and cloud architecture on AWS. Backed by multiple globally recognized certifications from Red Hat, AWS and Python Institute. Focus areas span Linux System Administration, Cloud Architecture, DevSecOps, Kubernetes, Cloud Security, and exploring AI skills to bridge infrastructure with intelligent, data-driven systems.

EDUCATION

- **TEK-UP University**
Engineering Degree in Computer Science – Specialization: Cloud & Infrastructure Management (from Year 2)

Tunisia
2025 – 2028

•

IPEIN Nabeul
Preparatory Cycle (PC) – Advanced Mathematics & Physics

Tunisia
2023 – 2025

EXPERIENCE

- **MedFlow – Data Science Intern**
Pharmacy AI Agent – Drug Interaction Detection & Prescription Intelligence

Tunisia
2026

◦

Contributing across a 3-person team to build an AI agent detecting drug interactions, contraindications, and dosage risks by analyzing prescriptions against patient medication history.

◦

Building a structured pharmaceutical knowledge base (DrugBank, WHO, ANSM) and a Python reactive engine combining rule-based lookup with LLM reasoning.

TECHNICAL SKILLS

- **Linux & Infrastructure:** RHEL 9 & Ubuntu Administration, System Hardening, Troubleshooting, Optimization
- **Networking:** TCP/IP, DHCP, VLANs, DNS, HTTP/S, SSH, FTP, OSI Model, Routing & Switching – CCNA fundamentals
- **Cloud & Orchestration:** AWS (VPC, NACLs, SGs, IAM Roles, S3), Docker/Podman, Kubernetes (Foundational), Virtualisation (VirtualBox/VMware)
- **Automation & CI/CD:** Ansible (Playbooks, Vault, Roles), Bash Scripting, Git/GitHub, Terraform (Learning)
- **Programming:** Python, C, Java
- **Backend & Frontend Development:** SQL, HTML/CSS, JavaScript, PHP

PROJECTS

- **VulnForge: Self-Hosted DAST Automation Platform** — *RHEL 10, Ansible, Podman, OWASP ZAP, Nuclei, Python, n8n*

GitHub Repository

◦

Engineered a multi-role Ansible playbook deploying a full security stack (hardened host, containers, scanners, orchestrator) in under 5 minutes.

◦

Built a Python parser to normalize, deduplicate, and severity-score findings from two scanner engines into automated reports, with nightly n8n scans and Discord alerting (Lynis 66→74).
- **Cloud Infrastructure: AWS VPC Two-Tier Architecture** — *AWS VPC, EC2, NACLs, Security Groups, IAM, MySQL*

GitHub Repository

◦

Designed a two-tier VPC with public/private subnet isolation, hosting a MySQL backend accessible only via a public-subnet EC2 client.

◦

Implemented defense-in-depth with layered Security Groups and NACLs, and assigned a pre-defined EC2 IAM role to enforce least-privilege access.
- **Linux Automation: RHEL Hardening with Ansible** — *Ansible, RHEL 9, Ansible Vault, firewallld*

GitHub Repository

◦

Automated RHEL 9 hardening using Ansible roles, Vault-encrypted credentials, and firewalld configuration.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (AWS SAA)** – Amazon Web Services

April 2026

•

Red Hat Certified Developer in Cloud-native Applications (EX188) – Red Hat

May 2026

•

Red Hat Certified Engineer (RHCE) in Enterprise Linux – Red Hat

Feb 2026

•

Red Hat Certified Engineer (RHCE) in Ansible – Red Hat

Feb 2026

•

Red Hat Certified Advanced System Administrator in Ansible – Red Hat

Feb 2026

•

Red Hat Certified System Administrator (RHCSA) – Red Hat

Dec 2025

•

PCAP – Certified Associate in Python Programming – Python Institute

March 2026

ASSOCIATIONS & EVENTS

- **Securinets TEK-UP:** Active Member — 2025

•

TEK-UP Digital Kongress 2026 (Apr 27–29) — Presented poster “*Prompt Engineering as a New Technical Competency*” to a 14-member international jury (Germany, France, Morocco, Tunisia). Competed in a Talan cybersecurity hackathon and found real vulnerabilities with no prior CTF experience.
